Education

Manipal Academy of Higher Education, Udupi

Expected July 2027

Bachelor of Technology – Data Science

Relevant Coursework: Data Structures and Algorithms, Machine Learning, Operating Systems, Computer Architecture, Database Systems

Skills

Programming / Backend / Frontend / Data: Python, C++, JavaScript, SQL, FastAPI, REST APIs, Supabase, React, HTML5, CSS, Pandas, NumPy, PostgreSQL

Machine Learning / LLM & AI Frameworks / Tools: PyTorch, TensorFlow, Scikit-learn, Transformers, NLP, LangChain, Ollama, RAG, Git, Linux

Projects

ReliefOps – AI-Powered NGO Resource Allocation and Dispatch Platform

FastAPI | Next.js | Firebase/Firestore | Google Cloud Run | Gemini | Google Maps APIs

Live Demo | Project Docs | GitHub

- Built a full-stack dispatch platform to convert unstructured incident inputs into confirmed records and dispatch plans.
- Developed FastAPI workflows for ingestion, edit/confirm flows, dashboard APIs, CSV export, and recommendation generation.
- Integrated AI extraction, duplicate detection, geocoding, routing, and Firestore persistence for production-style operations.

Projecto – Developer Productivity Desktop and Web Platform

Electron | React/TypeScript | Firebase | Node.js | VS Code Extension

- Built an Electron desktop app to manage project folders, launch dev commands, and track run status with integrated logs.
- Designed terminal execution modes for integrated logs, VS Code terminal runs, and external terminal workflows.
- Implemented Firebase authentication, device/session management, and web-dashboard integration for account-based access.

Multi-Agent AI Therapy System with Safety Guardrails

LangGraph | FastAPI | ChromaDB | Ollama | Twilio | RAG

GitHub

- Built a LangGraph-based multi-agent system with routing, safety validation, emotion inference, retrieval, and response generation.
- Integrated CBT-based RAG retrieval using ChromaDB to fetch relevant therapeutic techniques from embedded documents.
- Implemented emergency escalation logic using Twilio for high-risk conversation states.

APP-A-THON 2024 Winner – Healthcare Monitoring App

Flutter | Firebase Authentication | Firestore | Dashboard UI

GitHub

- Led a team to build a healthcare monitoring app with doctor/patient workflows, authentication, and health-report dashboards.
- Implemented Firebase Authentication and Firestore-backed storage for separate user and doctor data flows.
- Won 1st place and received a cash prize of 20,000.

Leadership & Achievements

APP-A-THON 2024 – Hackathon Winner

GitHub

- Led a team of developers to build a healthcare monitoring application for patient tracking and decision recording.
- Designed dashboards for doctors to visualize patient health metrics and reports.
- Won 1st place for the solution and received a cash prize of 20,000.
- Implemented authentication and separate storage flows for users and doctors using Firebase and Firestore.
- Built the frontend using Flutter.
