

Aditya Kosuru

+91-9515457049 — kosurusai646@gmail.com — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

Bengaluru, Karnataka, India

Education

B.Tech. in Data Science
Manipal Academy of Higher Education

Expected Graduation 2027

Projects

Projecto – Developer Project and Runtime Manager, [GitHub website](#) 2026

- Built **Projecto**, a production-ready **Electron**, **React**, and **TypeScript** desktop application that manages developer projects, launch commands, terminal processes, runtime states, and local app URLs from a unified workspace.
- Developed the connected Projecto web platform using **Next.js**, **Firebase App Hosting**, **Firestore**, and **REST APIs**, supporting authentication, **Dodo Payments** subscription verification, project syncing, billing flows, download pages, and desktop update checks.
- Implemented a production release workflow with **GitHub Releases**, **Squirrel.Windows auto-updates**, **SHA-256 validation**, and **CI-style verification**, allowing users to download and update the Windows desktop app through the live Projecto website.

Postify – Developer Activity and Content Automation Platform, [GitHub website](#) 2026

- Built **Postify**, a full-stack developer productivity platform using **React**, **TypeScript**, **Firebase Authentication**, **Firestore**, and **Cloud Functions** to convert Codex, GitHub, and manual activity into structured, ranked work highlights.
- Integrated **Vertex AI Gemini**, **schema validation**, **safety checks**, and **serverless draft generation** to create editable LinkedIn draft variants from selected highlights while keeping API keys and model calls fully backend-side.

ReleafOps AI – NGO Crisis Management Platform, [GitHub website](#) 2026

- Built a full-stack disaster response platform using Next.js, **TypeScript**, **FastAPI**, **Firebase**, **Firestore**, and **Cloud Run**, enabling NGOs to ingest reports, manage incidents, track resources, and coordinate dispatch operations through a production-ready web app
- Deployed a secure **SaaS-style** frontend/backend architecture with **Firebase Authentication**, **REST API** integration, **organization-scoped access**, **Google Maps APIs**, **environment-based configuration**, and **cloud deployment**, improving reliability and operational trust.
- Developed an AI-powered intake **pipeline** with **Gemini API**, **structured JSON extraction**, **validation**, and **human-in-the-loop review**, converting unstructured CSV/PDF/text reports into editable incidents, teams, volunteers, and resource records.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C++, SQL

Frameworks/Tools: React, Next.js, Electron, FastAPI, Firebase, Git/GitHub

Core Areas: Data Structures and Algorithms, Object-Oriented Programming, Full-Stack Development, Backend Development, REST API Design, Database Systems, Cloud Deployment (Google Cloud)
